

## Appendix B

The Best Practice No. 50 conditions are:

- The customer would like to receive calls to their number(s) at a location of theirs that is physically outside of the Rate Center associated with their number(s).
- The customer understands that these numbers must continue to be rated in accordance with the Rate Center currently associated with their number(s) and does not want them to take on the rating characteristics of the Rate Center of their new location.
- The New Service Provider provides service to customers physically located within the rate center to which the number is rated.
- The New Service Provider switch that already serves the Rate Center of the customer's number(s) must have a POI in that Rate Center. If this customer's number(s) are ported into the New Service Provider switch, they would be routed over the same POI, and then the New Service Provider would deliver the calls to the customer's premise that is located outside of the Rate Center associated with the customer's Number(s).
- The New Service Provider offers a tariffed and/or publicly published foreign exchange (FX) service in accordance with regulatory requirements that would cover this situation. Calls to and from customers located in the Rate Center associated with these ported numbers and the customer served by the New Service Provider will be routed exactly the same whether the New Service Provider assigns the customer a phone number from its 1K block of numbers in that Rate Center or whether the New Service Provider ports the numbers. This customer will be served out of the New Service Provider's tariffed and/or publicly published foreign exchange (FX) service offering in accordance with regulatory requirements.
- The LSR submitted by the New Service Provider reflects the customer's original service location as recorded by the Old Service Provider.

Gregory J. Vogt 2/13/08 2:54 PM

**Deleted:** already serves the Rate Center associated with the customer's number(s) out of the same switch to which they want to port this customer's number(s)

Gregory J. Vogt 2/13/08 2:54 PM

**Deleted:** has an existing POI at the ILEC's tandem over which calls to these numbers are routed
